# Delta BoilOUT

Safely Cleaning Pipes

DELTA PRODUCTS GROUP

***BoilOUT*** is our clear, neon green liquid alternative to many dangerous caustic offerings used for the removal of greases and oils from new or newly re-tubed boilers and equipment. It is also used for final prep on new building piping systems or anywhere the removal of factory oils from piping is needed prior to start-up. ***BoilOUT*** is safe for personnel and simple enough to use in-house but familiar to most mechanical contractors. A few hours of pump circulation is recommended prior to system start-up, then the solution can be safely wasted to drain. It is concentrated and dilutable for specific job needs and is best applied heated at a 3-5% ratio. ***BoilOUT*** is free-rinsing with water to assure that all oil and grease has been thoroughly removed. Better and safer than the other alternatives and drain disposable.

## Additional *Delta BoilOUT* Benefits
